INTRODUCTION

DELEGO PANEL SMART is a POE-powered Android touch screen panel for the control and supervision of Home & Building automation systems.

This manual contains all the information necessary to configure the touch panel in combination with the Ekinex DELEGO supervisor but also in combination with third-party supervision systems.

The Delego Panel can also be configured as a video intercom apartment station in combination with the Ekinex DICO IP video intercom solution.

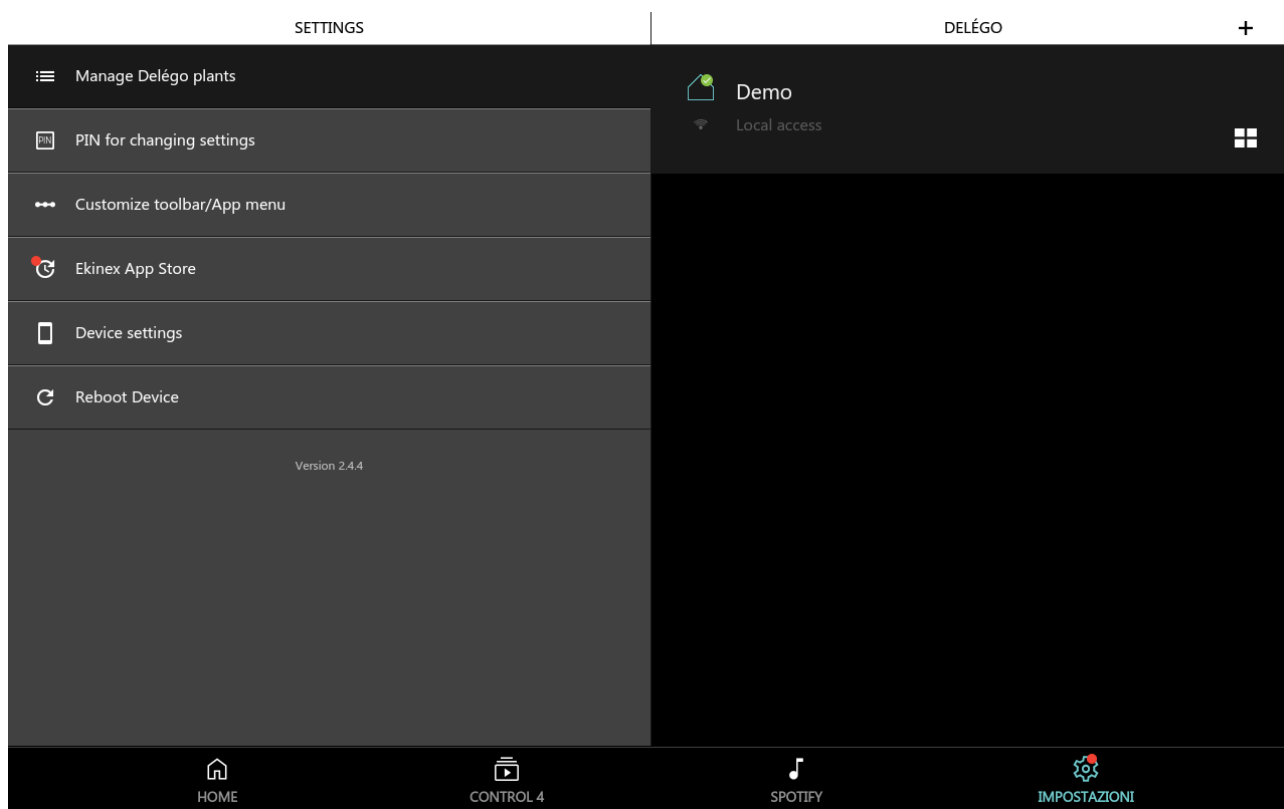

CONFIGURATION

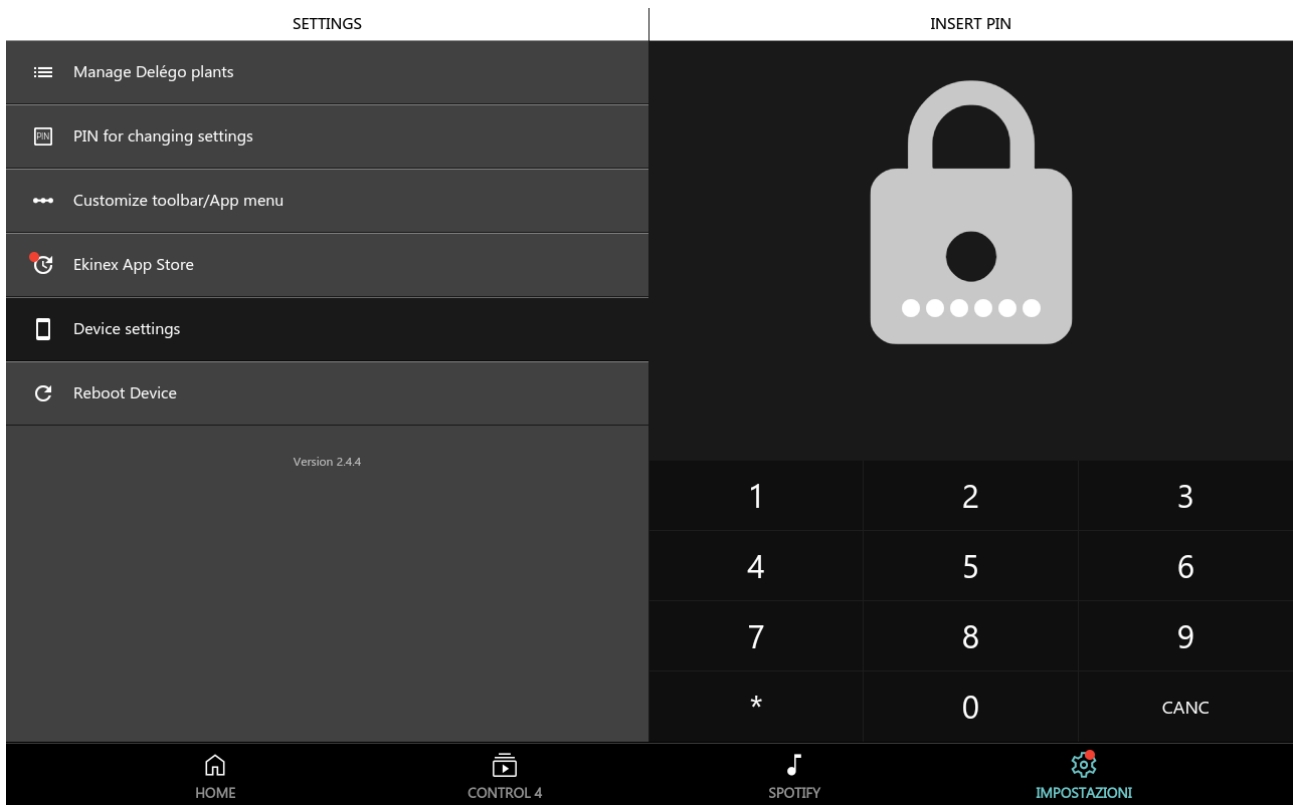

Device Settings

By connecting the Delego Panel to the network, it will automatically be assigned an IP address via DHCP.

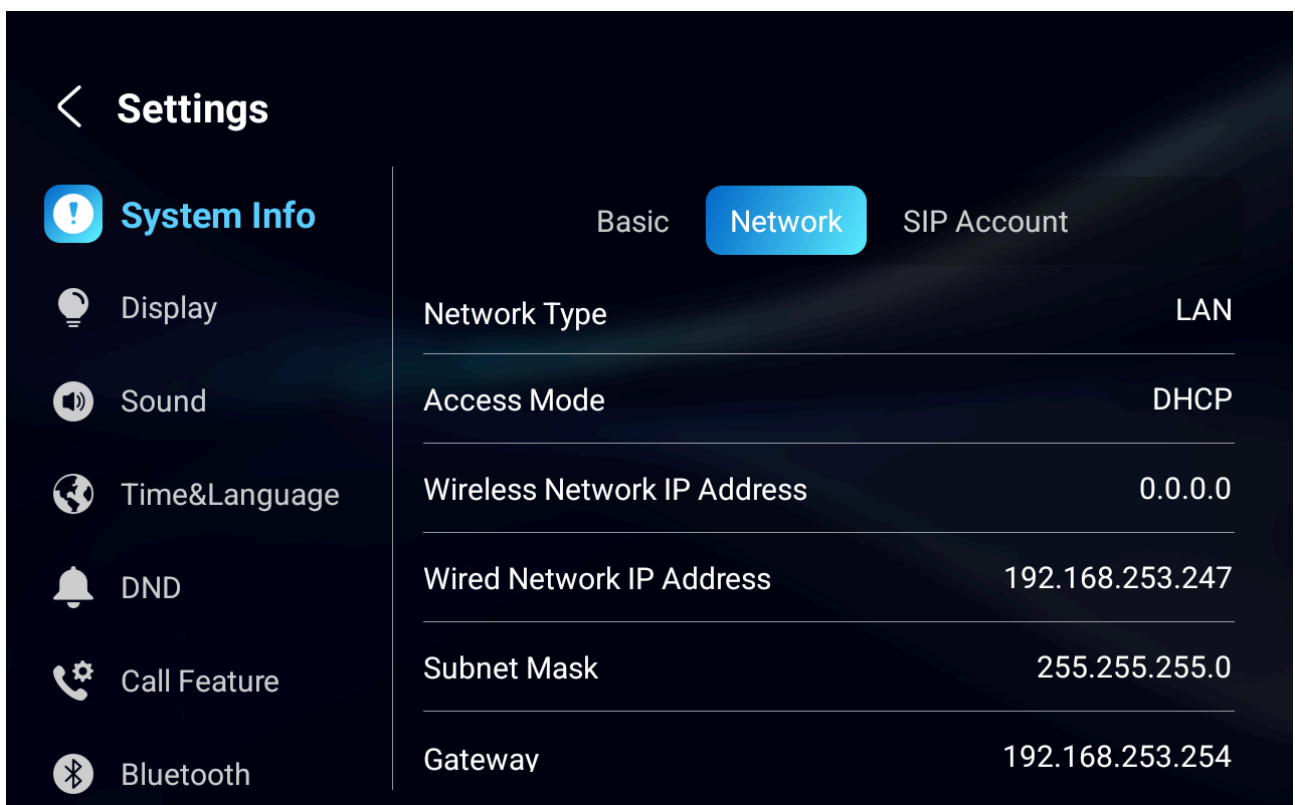

To access the WEB configuration pages you need to know the IP address of the device.

On the panel enter **Settings** click on **Device Settings** and enter the 6-digit pin number. The default PIN is **123456**.

Click on **Network** to view the network parameters assigned by DHCP.

To change the network settings click on **Advance**, re-enter the PIN and click on **Confirm**.

Alternate DNS Server

On this page you can change the IP address and other network parameters.

To access the configuration web page, open a browser (Google Chrome recommended) and type the IP address of the device, after checking that you are in the same network as the Delego Panel.

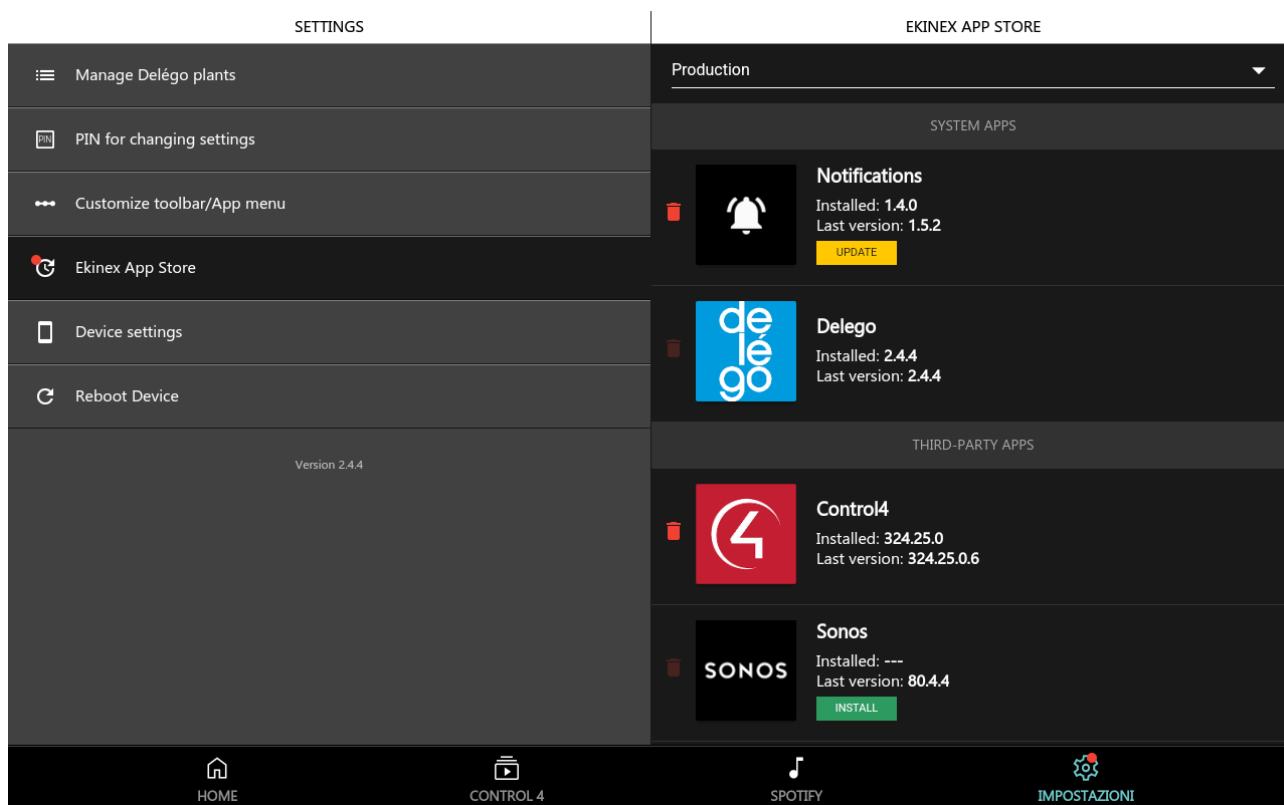

From the Settings menu you can change other parameters such as screen brightness, ringtone volume, time and language, DND, etc...

Ekinex App Store

The Delego Panel has been optimized for use in combination with Delego Server, but it is possible to add third-party apps and call them from the toolbar at the bottom of the display. It is also possible to use the Delego Panel in combination with other Home & Building automation systems simply by installing the appropriate apps.

The installation of the Apps takes place via the Ekinex App Store.

In the Ekinex App Store section you can find a selection of apps that have been validated and approved by Ekinex for correct functioning on the Delego Panel.

To install an app, simply click on the button **Install**; wait for the download to complete (accompanied by a progress bar on the installation button) and for the actual installation, agreeing when asked in the appropriate dialogue window.

By subsequently accessing the app store, the installed version of the apps and the one present on the store are displayed.

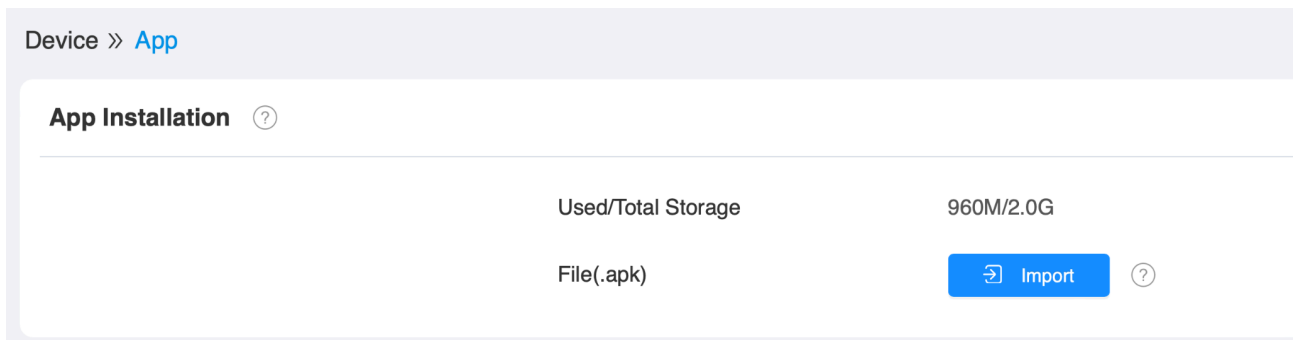

Ekinex periodically updates the apps on its store; the presence of more updated versions is indicated by a red dot on the icon **Settings**. The user can decide whether to proceed with updating the app by clicking on the button **Update**.

APK Installation

If you want to install an app that is not present in the Ekinex App Store, you can do so via APK upload

By accessing the Delego Panel web page in the section

DEVICE > APP > APP INSTALLATION

you can upload the APK file of the desired app. It is always recommended to use a reliable site to download APK files, for example www.apkpure.com

In the case of apps that are not present in the Ekinex App Store, compatibility with the Delego Panel is not guaranteed.

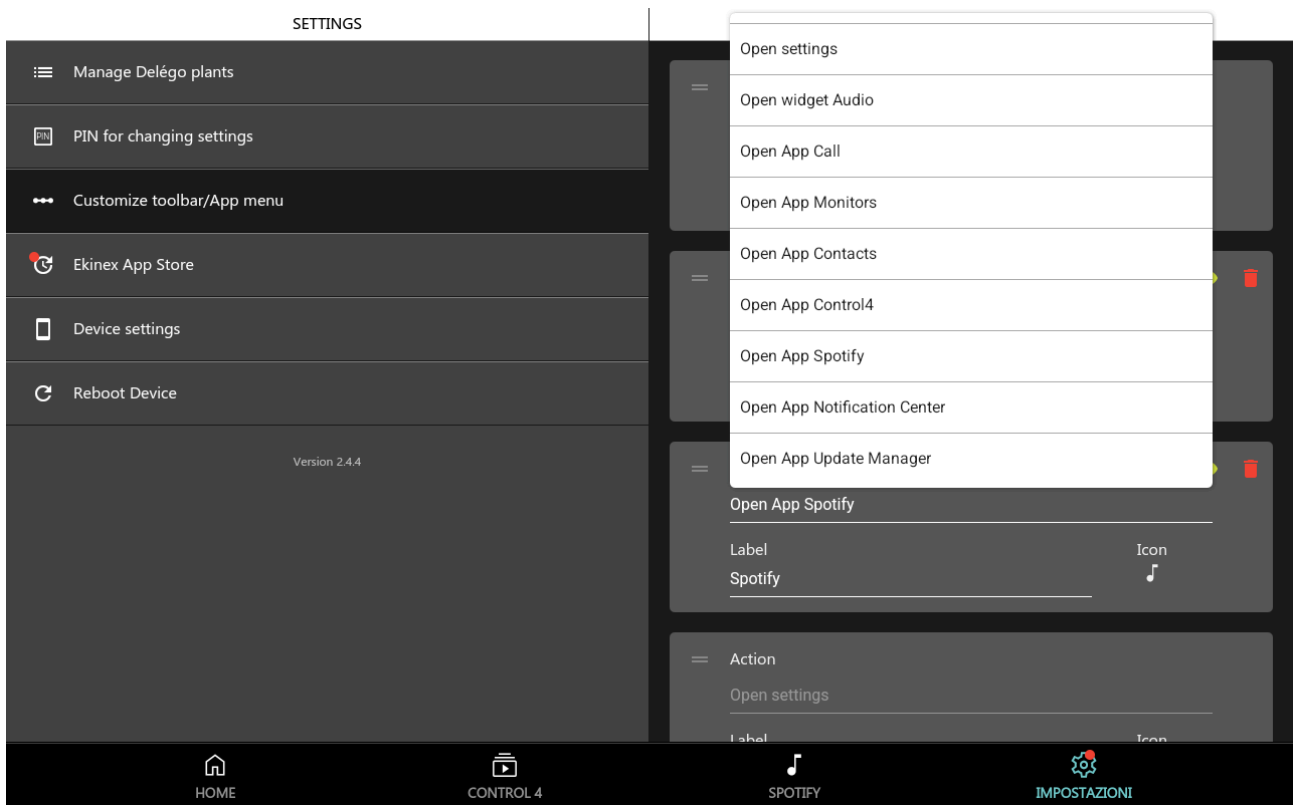

Once the APK file has been uploaded, the app is automatically installed.

At this point, you need to access the Toolbar Configuration section from the panel to link the app in the menu. This operation is described in the following chapter of this manual.

Toolbar configuration

In the lower part of the panel there is a toolbar with the navigation menu function between the various APPs and functions. Delego and Sentio are already present in the toolbar.

Once a third-party app has been installed, it must be added to the toolbar via the Toolbar Configuration Menu.

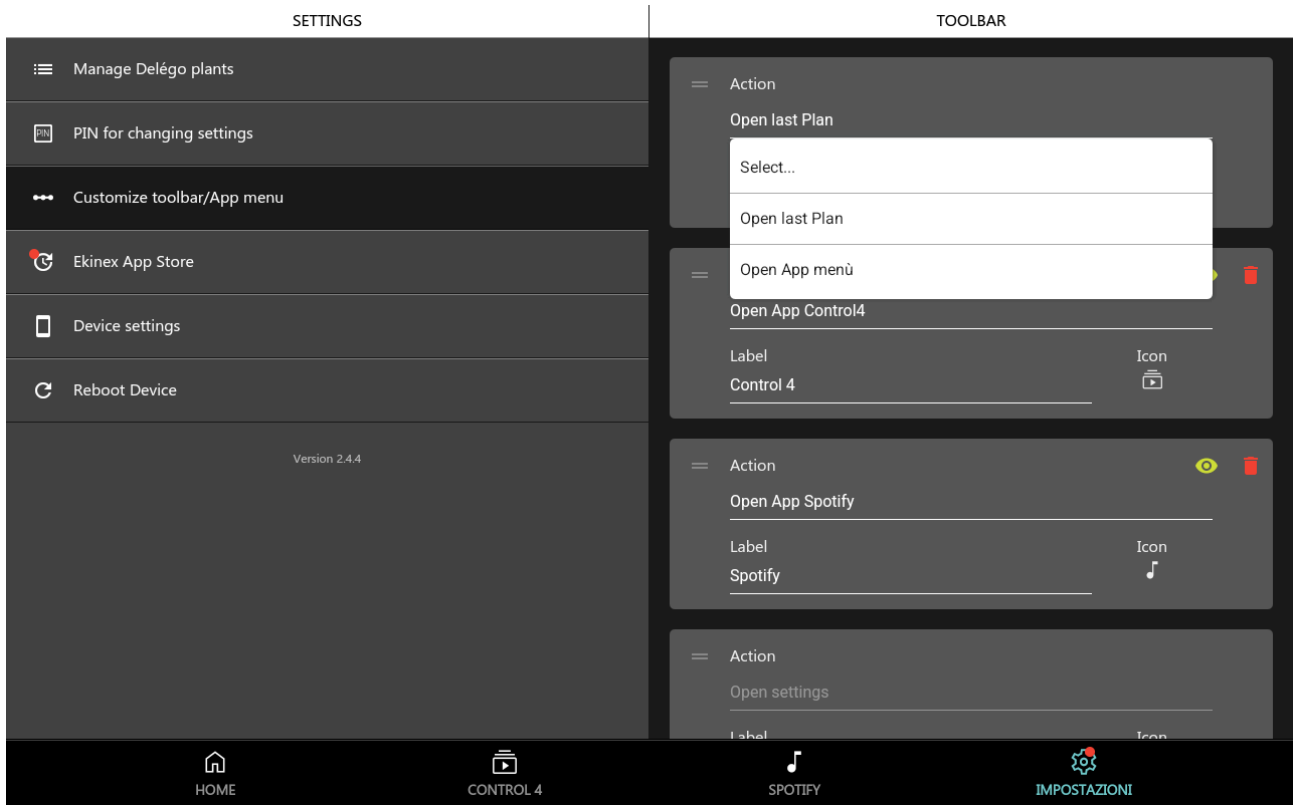

By clicking on the button **Add Action** a new section will be created; by clicking on **Selection** you choose the app to add to the toolbar (or the system function you want to recall).

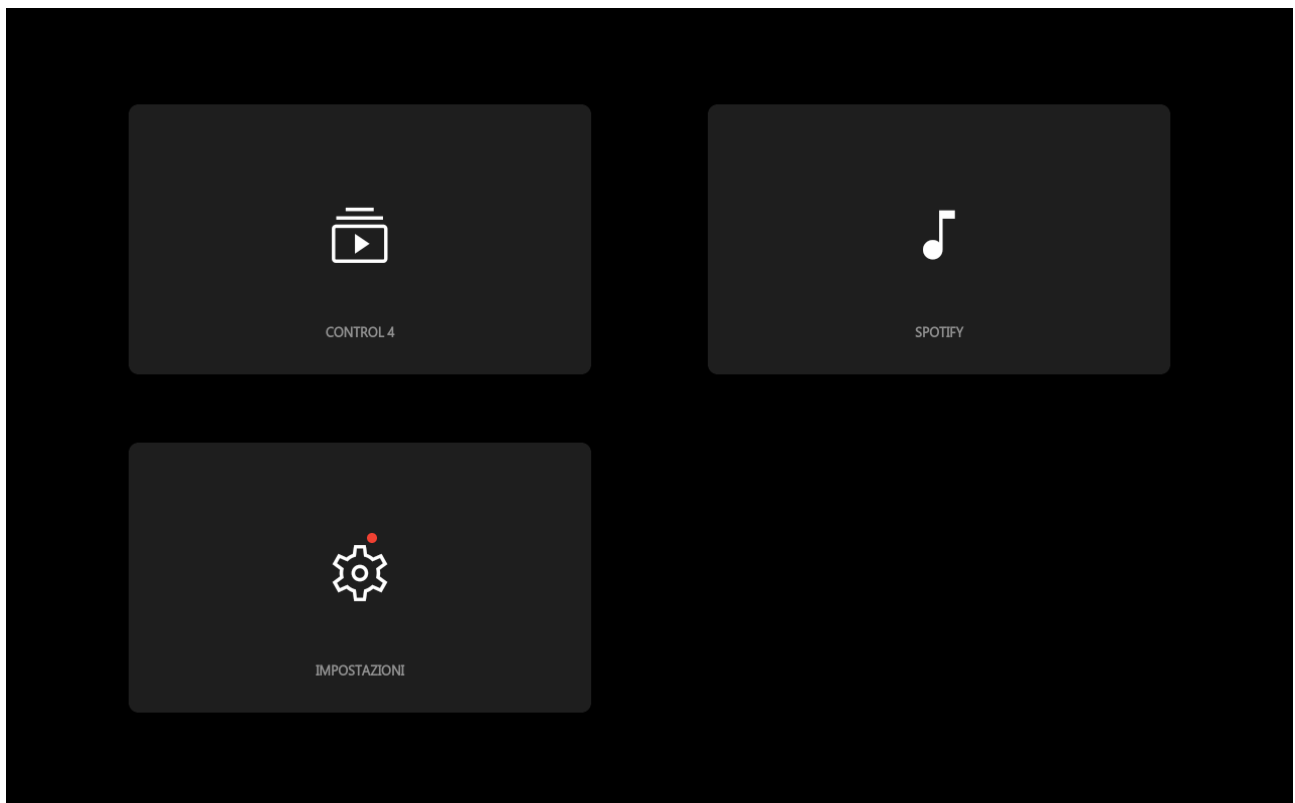

A name (Descriptive) and an icon (Icon) must also be added which will be displayed in the toolbar; once done, confirm the changes by clicking on **Save**.

By clicking on the lines at the top right of each action it is possible to reorder the icons on the toolbar using Drag and Drop.

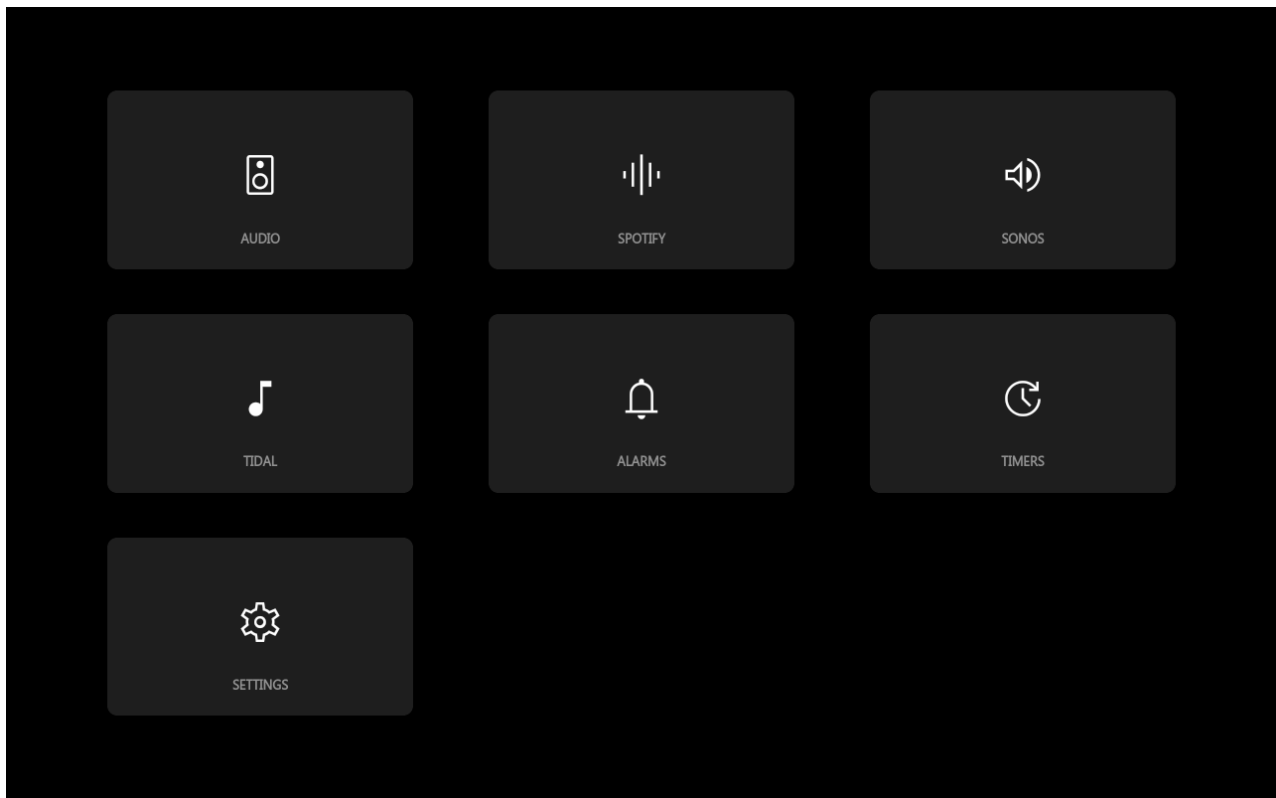

If a Delego Server is present, the home page is automatically set as Delego Server. Alternatively, you can configure the app selection menu as your home page. To do this as Action choose “Open App Menu” from the menu as in the next image:

In this case, clicking on the Home button in the toolbar takes you to the menu:

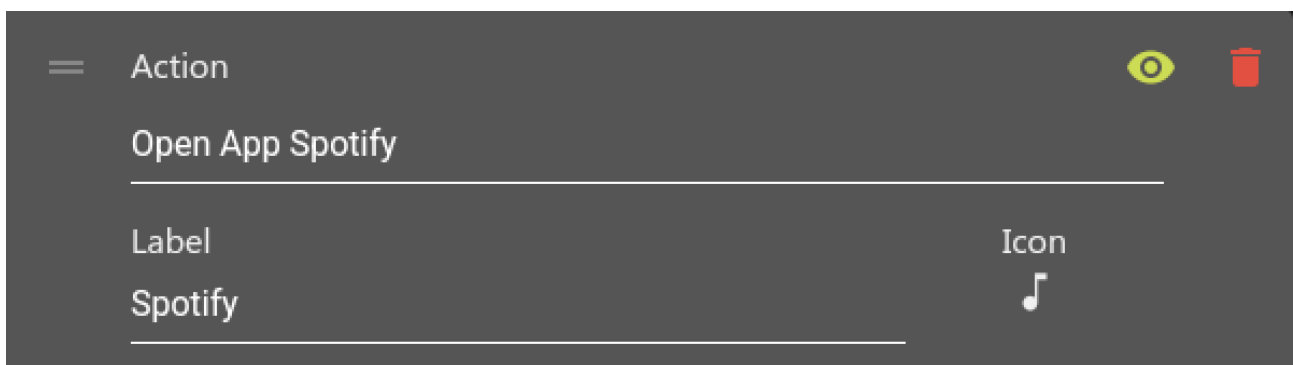

The menu can contain up to 9 apps and the size of the buttons automatically adapts depending on the number of apps displayed.

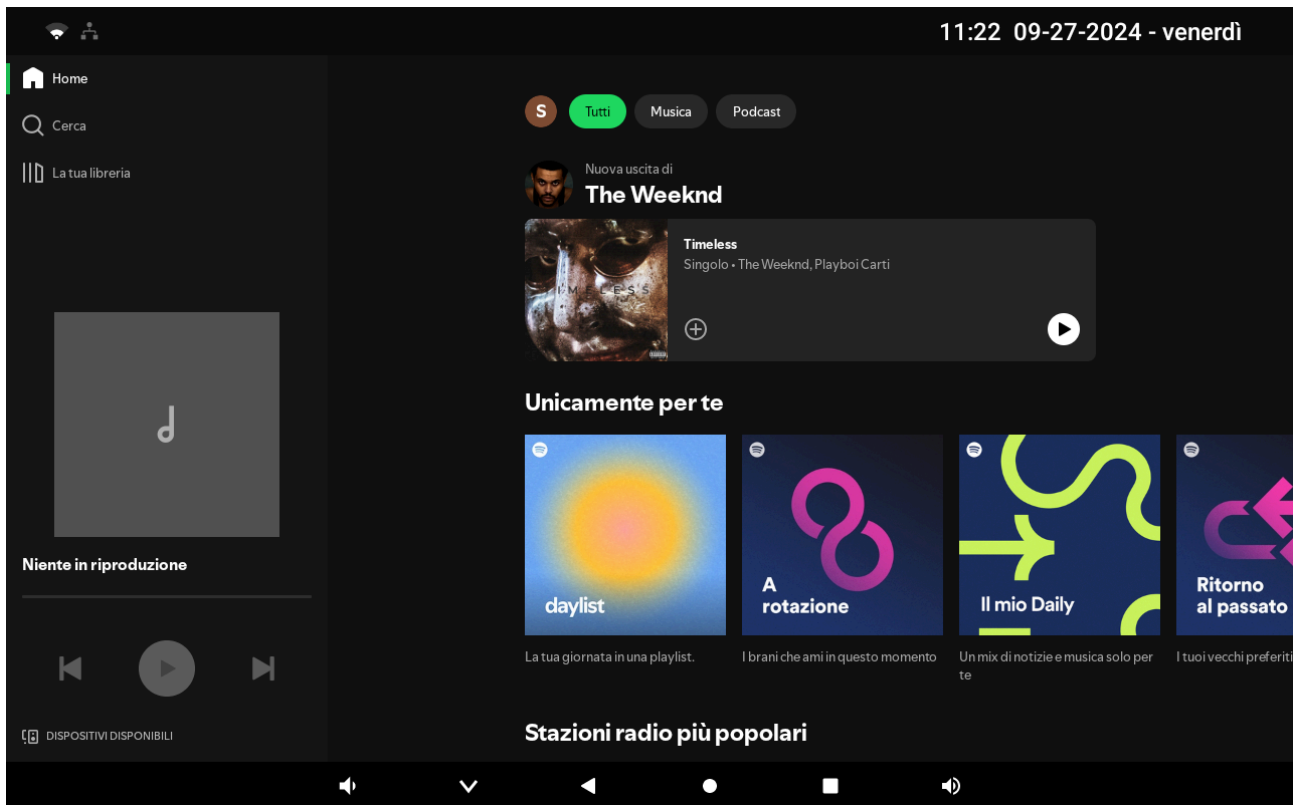

It is possible to hide an icon from the toolbar without necessarily having to delete it. To do this you need to click on the yellow eye icon.

However, if you want to permanently delete the icon from the toolbar, you need to click on the red trash can icon. This action only deletes the link to the toolbar, it does not delete the app, which remains installed on the Delego panel, but not accessible.

Third party apps

Within third-party apps, the toolbar with Delégo Panel shortcuts is not visible; instead, the typical Android system bar is displayed.

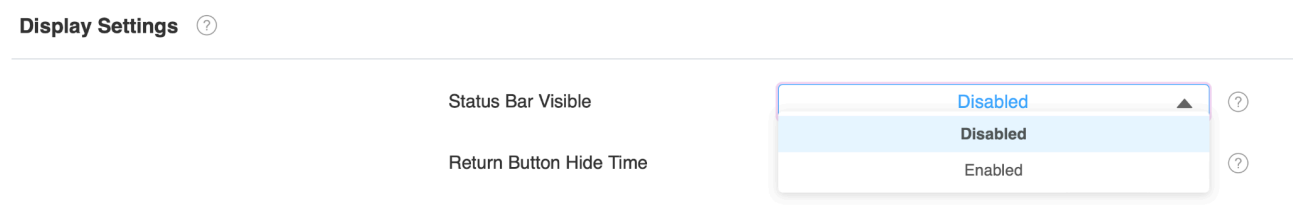

Pressing the center (circle) or back button (left-facing triangle) returns you to the main panel menu.

The status bar at the top of the panel can be hidden: by accessing the Delego Panel web page in the section

DEVICE > DISPLAY SETTINGS > DISPLAY SETTINGS

it is possible to establish whether it should be visible or hidden.

If you want to automatically start a third-party app at startup, and always return to this app after a predefined time, you need to open the following section on the WEB page...

DEVICE > APP > APP CONFIGURATION

App Name	Delégo	?
Intervals Without Operating (s)	Control4	?
Start Up Enabled	Spotify	?
Turn Back App	Notification Center	?
Turn Back App After Awakening	Delégo	?
APP Keep-Alive	Update Manager	?

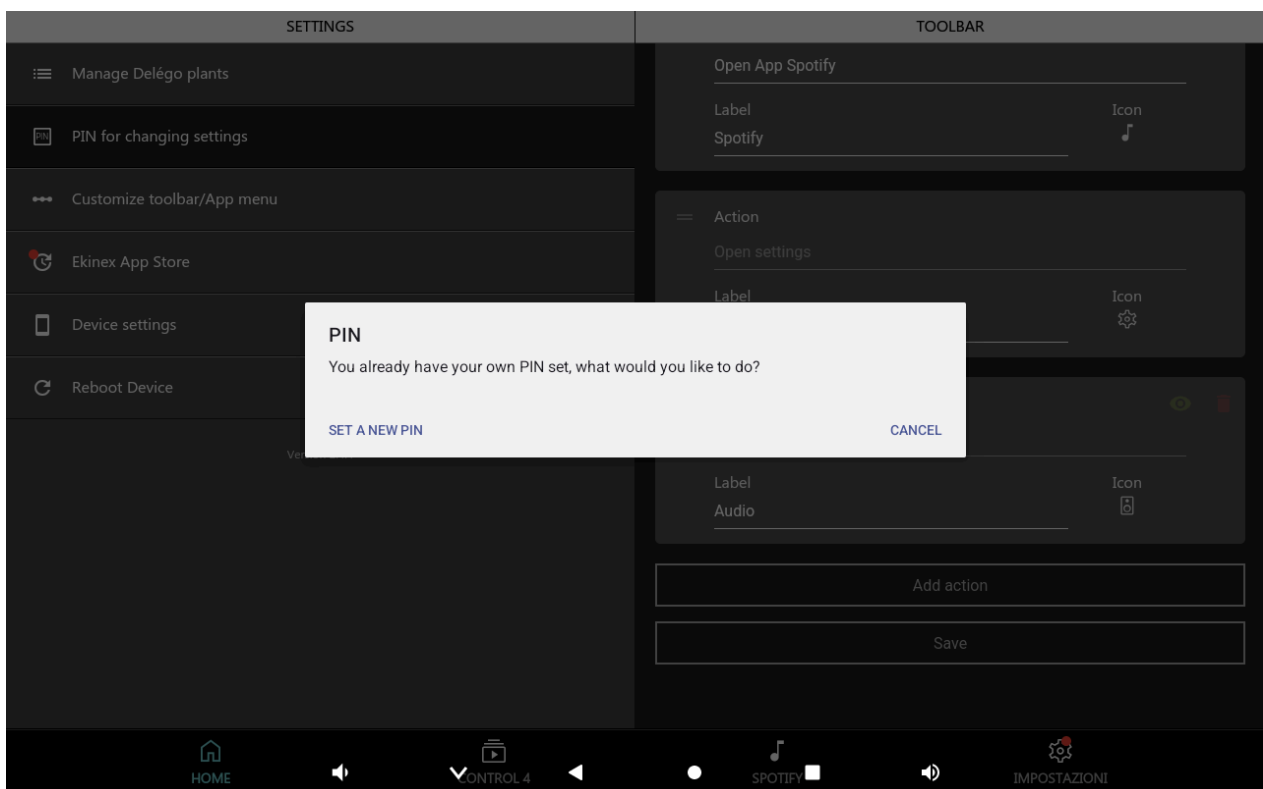

...and select the following options:

- Start Up Enabled
- Turn Back App
- Turn Back App After Awakening
- App Keep-Alive

Confirm the changes by clicking on Save.

PIN for changing settings

You can change your PIN to access the settings by accessing the menu item “PIN to change settings”:
